

# Evaluating a Framework for Different Networking Paradigms

Denis Martin and Hans Wippel ({martin, wippel}@kit.edu)

## Decoupling Applications and Protocols: NENA – Netlet-based Node Architecture [1]

## Evaluation Methodology

### How to evaluate (Framework) Architecture?

- Concept Evaluation → Use Cases
- Determine Invariants [2]

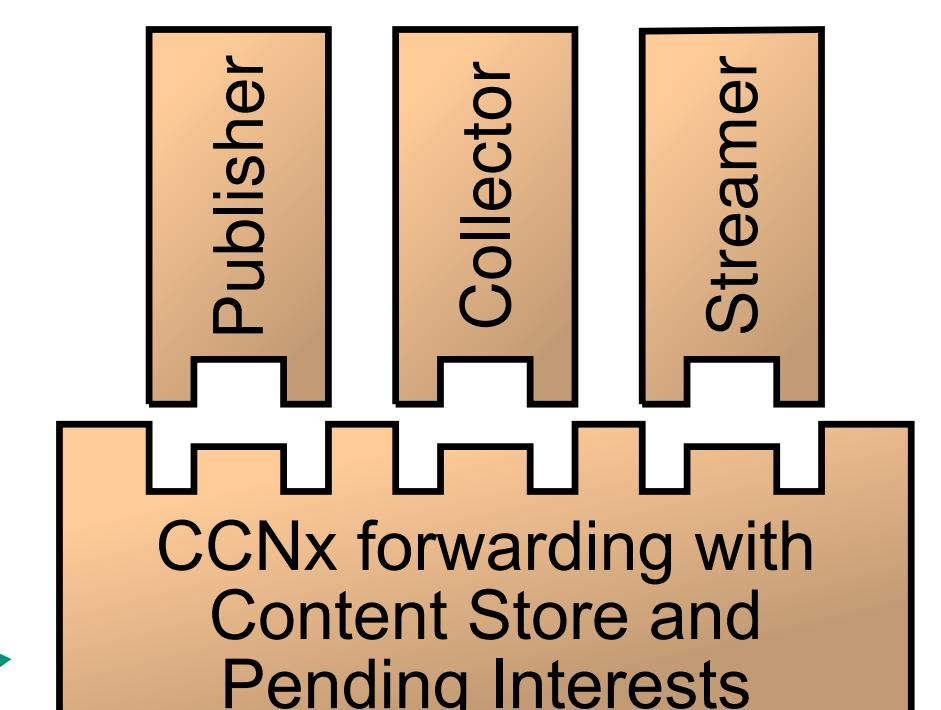

### Criteria for Use Cases

- C1 – Basic Communication Services usable?
- C2 – Advanced Options/Services usable?
- C3 – Naming with URIs suitable?
- C4 – Services transparent to applications?

## Implemented Use Cases for Evaluation

### Applications

- Web-Browser, Chat/IM, Video, Fileserver

### Network Protocols & Paradigms

- CCNx – Content-Centric
- BitTorrent – Non-Sequential Download
- XIA – eXtensible Internet Architecture
- DTN – High Delay, Intermittent Connectivity
- MQTT (Pub/Sub) – Network Services
- Today's Protocols – TCP-like, HTTP-like, Video-Transport

## Evaluation Results and Conclusion

| API Usage & Criteria |         | TCP-like | Video           | HTTP-like | BitTorrent | CCNx                                | DTN | Pub/Sub | XIA |
|----------------------|---------|----------|-----------------|-----------|------------|-------------------------------------|-----|---------|-----|
|                      |         | GET      | ○               | ○         | ✓          | ✓                                   | ✓   | ○       | ✓   |
| Criteria             | PUT     | ✓        | ✓               | ✓         | ○          | ✓                                   | ✓   | ✓       | ✓   |
|                      | CONNECT | ✓        | ✓               | ✓         | ○          | ○                                   | ○   | ○       | ✓   |
|                      | BIND    | ✓        | ✓               | ✓         | ✓          | ○                                   | ✓   | ✓       | ✓   |
|                      | C1      | ✓        | ✓               | ✓         | ✓          | ✓                                   | ✓   | ✓       | ✓   |
|                      | C2      | ○        | ○               | ✗         | ✗          | ✓                                   | ✗   | ✓       | ✓   |
|                      | C3      | ✓        | ✓               | ✓         | ✓          | ✓                                   | ✓   | ✓       | ✓   |
|                      | C4      | ✓        | ✓               | ✓         | ✗          | ✓                                   | ✗   | ✓       | ✓   |
|                      |         | ✓        | intuitive usage |           | ✗          | additional implementation necessary |     |         |     |

### Invariants

#### Application Interface

- URIs as Names
- API Primitives
- Requirements

#### Network Protocol Implementations

- Query Interfaces
- Netlets, Multiplexers & Servlets
- Network Attachment
- Flow Identification & Flow Control
- User Feedback & Session Management

Decoupling of Applications and Protocols

Beneficial for Application Programmers

Framework for Network Protocols and Paradigms

Minimal Design Constraints for Protocols

Future Work

Definition of suitable Requirements & Properties for matching protocols to application requests
